ABOUT OUR TEAM

EFFECTIVE TECHNOLOGIES TEAM

A team of highly skilled and well-educated specialists (project managers, software engineers, business analysts, quality engineers and UX designers) dedicated to creating innovative solutions in the field of information technology.

OUR MISSION

To apply the high-quality methods and cutting-edge technologies in supporting our clients to get results through the implementation of information systems in the shortest possible time period.

OUR CLIENTS

Corporations, banks, government agencies, small and medium enterprises in Russia and abroad.

OUR RESOURCES

1

Over 150 employees with high levels of expertise in various fields.

2

Our development centers are located in Moscow and Nizhny Novgorod - the top 3 IT regions in Russia.

3

100+ successfully implemented projects in various fields and industries.

4

Certified managers: PMP (Project Management Professional), information security, numerous professional trainings and educational courses.

5

Customer-focused and individualised service.

6

Flexible interaction models: project outsourcing, professional teams of experts as a service.

OUR EXPERIENCE

BUSINESS PROCESS AUTOMATION

Electronic document flow, coordination chains; CRM, supply automation, tenders search; production management.

E-PROCUREMENT SOFTWARE

Development of high-load e-commerce solutions, electronic trading platforms, automation systems for purchasing processes.

BANKING SOFTWARE

Development and implementation of remote banking service and financial management systems for legal entities and individuals.

PERSONAL ACCOUNTS

Development of personal web-accounts for organizations and users with a flexible system of roles and powers.

LEARNING MANAGEMENT SYSTEMS

Portal development for resident and remote training according the SCORM standard.

ANALYTICS AND MONITORING SYSTEMS

Authoring of analytical dashboards and report creating systems; business logics of information systems monitoring.

STATE INFORMATION SYSTEMS

Development of government information systems, development of services providing the interoperability between citizens and organizations with government institutions.

WEB-PROJECTS

Development of marketplaces, online stores; standard and reference information management systems and loyalty programs.

WHAT ABOUT YOU?

OUR ADVANTAGES

LOW LABOR COST

We optimize business processes and issues at a high level (application of cloud technology, regional placement of programming staff), using all possible tax advantages available in the Russian Federation.

FLEXIBLE COLLABORATION MODELS

Project outsourcing, dedicated teams organization (Team as a Service approach).

THE USE OF ADVANCED EFFICIENT TECHNOLOGIES

The use of technologies of analysis, programming, testing, applications and software technical support.

EXPERT EVALUATION AND QUICK RECRUITMENT OF QUALIFIED RESOURCES

THE SHORTEST PROJECT ASSESSMENT PERIODS

THE COMPANY QUALITY SYSTEM IS CERTIFIED ACCORDING TO ISO 9001:2015 STANDARDS

COLLABORATION MODELS

1

PROJECT OUTSOURCING

It is used for time-limited development of one specific software product (product module).

➤ **Customer benefits:**

Cost savings compared to internal development since the outsourcer takes full responsibility for timeframes and result.

2

TEAM AS A SERVICE

Assigning a separate group of experts fitting the challenges of the customer. The assigned group has the expertise required by the customer. This model is designed for long-term cooperation.

➤ **Customer benefits:**

Constant availability of resources with the necessary expertise and ability to plan tasks based on the allocated resource. No need to hire and organize the team.

TECHNOLOGIES

APPROACHES

AGILE METHODOLOGY

Application of flexible (Agile) development methodologies with delivery of predictable results to the customer at each iteration (SCRUM, Kanban).

AUTOMATION

Application of Continuous Integration practices in projects allows automated publication of releases at any time, together with automated testing.

PROTOTYPING AND MODELING

Application of dynamic prototyping of interfaces and modern notations of business process modeling.

SOA

Application of service-oriented architecture (SOA) in the development of information systems.

OUR OWN SOLUTIONS

Use of our own solutions library reduces the effort required to implement standard components.

TECHNOLOGIES

ATD

A

ANALYTICS

Using international business modeling notations BPNM 2.0, IDEF, UML.

Dynamic prototyping: Axure, Sketch, Figma.

Using tools: MS Visio, Business Studio.

Development of use-cases and user-stories.

T

TESTING

The use of testing management systems: TestRail, TestLink.

Testing automation with the help of: Unit test, Selenium, HP Quiktest Professional, Python.

Application of load testing tools: JMeter, Tsung, WAPT.

Hardware basis for testing information systems and mobile applications in their native environments.

D

DOCUMENTING

Authoring of functional specifications, technical specifications, component technical specifications, etc.

Guides, tutorials, movie tutorials.

The use of Russian and international documentation development standards (ISO, IEC, IEEE).

SYSTEM DEVELOPMENT

CUSTOMER'S SCOPE

To implement a project to develop a "Marketing" information system, which allows automation of the process of coordinating the company's advertising budgets.

CUSTOMER'S SOLUTION

To choose an experienced and qualified contractor – Effective Technologies. We'll do all the rest.

SOLUTION STAGES

Interviewing all the customer's stakeholders and preparing a functional specification for the system.

Preparation of estimates and quotes. Coordinating the contract with the customer.

Detailed analytical study of the future system: preparation and presentation to the customer of dynamic prototypes, user story, coordination of TOR.

Start development of a flexible iterative system. You can see the results in a couple of weeks.

New functions released every two weeks. The customer can make adjustments and the system starts working right away.

A complete set of technical, operational and user documentation is handed over to the customer.

RESULTS

The system is in commercial operation as it continues to be maintained and developed.

DIVERSIFICATION OF DEVELOPMENT

CUSTOMER'S SCOPE

The customer's company owns the rights to the Project system. The system was developed and maintained by the "Former Developer" company that started to issue large bills for its services. The customer's company is not able to maintain the system on its own, since it does not have the necessary experts on its staff. In addition, the system has almost no documentation, and the documents in existence are outdated. The result is that the customer is completely dependent on the developer.

CUSTOMER'S SOLUTION

Diversify development with Effective Technologies. We'll do all the rest.

SOLUTION STAGES

Interviewing all the customer's stakeholders, reviewing the functionality and system code (if possible). Audit.

Coordination of the agreement for the development of new functional tasks and the system support agreement.

We select the specialists necessary to support and develop the system. We study the program code. We create our own code repository and release system.

Now we can carry out tasks for the development of functionality and current system support, without creating any issues in commercial operation.

We document the old program code, update technical documentation on the system and user manuals. The customer will no longer have problems attracting new contractors.

RESULTS

We can either develop and maintain the system together with the "Former Developer" company, or without it.

TEAM AS A SERVICE

CUSTOMER'S SCOPE

For the support and service of several information systems you need a team of technicians who are long-term SME experts. However, the customer company staff does not stipulate for such possibility.

CUSTOMER'S SOLUTION

Effective Technologies company will create the effective team for you.

SOLUTION STAGES

Interviewing of all customer's constituents Audit of information systems.

We form a proposal for a team staff. Negotiation of resource agreement.

We choose the necessary specialists, begin study the program code and current information systems infrastructure.

We create an opacity system for setting tasks and allocating team resources to accomplish them.

We correct the team staff together with the customer for appropriate metrics of quality/expenses in the process of supporting and developing information systems.

RESULTS

The dedicated team works, accumulates subject expertise, solves the tasks of support and development without increasing costs.

WE ARE READY TO WORK WITH FOREIGN CLIENTS

- We have managers and analytics with spoken English.
- Our developers and QA are good in technical English.
- We are experienced in tax-haven projects for creating software.
- We understand the peculiarities of working with foreign clients: time zones, requirement level and various payment methods.
- Low rates due to currency difference, general administrative expenses and tax optimization.
